Noël Tordo

Noël Tordo (PhD in Virology in 1988, HDR in 1993, Paris VII) has headed Pasteurian Research Units in Paris (Antiviral Strategies) and Lyon (Biology of Viral Emerging Infections) as well as the WHO Collaborative Centre on Arboviruses and Viral Haemorrhagic Fevers and the OIE Reference Laboratories for Rift Valley Fever virus and Crimean Congo Haemorrhagic Fever virus. Since 2015 he is General Director of the Institut Pasteur de Guinée, one of the younger members of the Pasteur Network.

Noël Tordo is interested in both fundamental and translational aspects of emerging viral diseases, mainly zoonoses (rabies, viral haemorrhagic fevers...) analysed under a "One Health" approach with worldwide collaborations. His main scientific contributions have concerned the molecular and cellular biology of (re)emerging virus: (1) the detection of the virus in the animal vector ; (2) the molecular interactions and potential co-evolution with its hosts ; (3) the mechanism that accompany the necessary dynamic allowing to jump across the species barrier, from animal to human ; (4) the development of future therapies, based on vaccines or antivirals ; (5) the establishment of multiplex diagnosis tools adapted to neglected diseases in developing countries.
